Education

Indian Institute of Technolog, Roorkee — Roorkee, IN
Bachelor of Technology — *Aug. 2023 – May 2027*

Experience

AI Agent Evaluation Engineer — Jul 2026 – Present
@Handshake.AI — *Remote*

- Designed repository level software engineering tasks to stress test autonomous coding agents across workflows
- Built Docker-based environments and behavioral verifiers to evaluate agent generated code
- Analyzed execution traces to identify implementation errors, edge case failures, and reward hacking behavior
- Iterated on task specifications, test suites, and evaluation criteria based on agent trial results using Python, Docker, Git, Linux, and Harbor framework

Mentee @SOK — Jan 2026 – Mar 2026
@KDE — *Remote*

- Standardized mentorship.kde.org's inconsistent card components into a single reusable Hugo partial and SCSS module, using Hugo's variants to keep page-specific styling [Merged PR]
- Refactored the resources page to render entries from Markdown content files instead of hardcoded HTML, so adding a resource no longer needs template changes
- Built a new /programs page listing KDE's 6 mentorship programs, including GSoC and SoK, and expanded the resources section while fixing broken links across it [Merged PR]

Backend AI Intern — Jun 2026 – Aug 2026
@FlyRank.ai — *Remote*

- Built an MCP server integrating the GitHub Actions and Slack APIs that parses failed CI logs to extract root cause, failing commit and author, and posts structured alerts for triage
- Designed a multi-agent PR review pipeline where an orchestrator fans out each diff to specialized agents running concurrently and aggregates their outputs into a single review
- Integrated the pipeline with GitHub via webhooks to post inline review comments on pull requests, deduplicating overlapping findings across agents

OSS Contributor @CNCF — Dec 2025 – Present
@Inspektor-gadget — *Remote*

- Added a verify CLI command in Go that validates eBPF gadgets against OCI registries without running them locally, removing a multi-step manual process for all ig users [Merged PR]
- Fixed a Docker registry host normalization bug in the OCI image push workflow that was silently breaking credential reuse from /.docker/config.json for self-hosted registries. [Merged PR]

Projects

Campus Brain | *Python, Node, MCP, Orchestration, APIs, RAG, LLM* — May 2026

- Built a AI assistant connecting an LLM to 4 independently deployable MCP servers via a custom TypeScript orchestrator, using a tool calling agent loop with SSE token streaming and per session conversation memory.
- Designed and deployed a RAG pipeline over scraped academic PDFs using structure aware chunking, parsed by document layout and metadata filtering across branch, year, and semester, combined with Gemini embeddings and a Chroma vector database to eliminate irrelevant retrieval on structured queries.

Server Proxy | *GOlang, CLI, HTTP/HTTPS, Concurrrency, TCP* — Dec 2025

- Built a forward proxy in Go with automatic protocol detection (HTTP vs. HTTPS) and TLS tunneling via the CONNECT method. Handles 50+ concurrent connections using goroutines and channels.
- Added middleware support for logging and request filtering, with documentation for local setup.

Skills

Languages: Go, TypeScript, Python, C/C++, SQL (PostgreSQL), JavaScript, HTML/CSS
Frameworks:: React, Next.js, Express, Node.js, Hugo, FastAPI, Prisma
Agentic AI: Claude Code, 9Router, GeminiCLI
